# A Decentralized Network

## Web3.0 – Decentralized Network:

The Internet has gradually changed from its initial freedom/sharing to a monopoly tool of capitalists, industry giants, and governments, who achieve their own political goals by controlling network facilities that should belong to all people, controlling Internet enterprises, and controlling public opinion.

Capitalists control Internet companies, when the President of the United States' Twitter be blocked, the Internet has become dirty;

Interest groups control the network, when you pay for transactions on the internet, there are countless interest groups staring at what you do, and someone will control and arbitrarily seize your private property;

The government controls the network and needs you to use it through KYC, so they all know that your private account/personal network assets may be blocked at any time because they don't like you, and even the internet applications with the most users in the world will face shutdown/removal at any time, all of which they only need to issue a document;

Many Internet entrepreneurs have worked hard to study technology to serve users, but in some countries they still need to spend time and money to file various worthless approvals.

*There is no way for us to change political issues, but we can create a new field and gain freedom for a period of time -  
Nakamoto*

# Create a decentralized network

It's a technological revolution that doesn't just depend on us

**We need your participation**

“There is no way for us to change political issues, but we can create a new field and gain freedom for a period of time.”

Nakamoto

# The VirtualGameCoin

VirtualGameCoin hopes to achieve seamless connection between users and global application developers through decentralized Internet facilities + anonymous social platforms and token VGC, so that developers can release their works to global users for free through the VGC ecosystem, without worrying about network facilities and funds being regulated and monopolized. While enjoying the facilities and services of online applications, players can pay fees and trade with developers through VGC. Decisions are made by all community actors, with the aim of building a secure and highly decentralized Internet community infrastructure that is all developer- and user-driven. Starting from the ecological application within the VGC community, VirtualGameCoin will gradually become a universal token for online transactions and payments in the Internet industry.

# VGC Ecology

## VGCMainNet

VGC Blockchain mainnet  
**Basic mainnet facilities**

## VCore

VGC Application  
**User sources**

# VGCMainNET Top

## Main Node

It is used for block packaging confirmation and data synchronization for miner network nodes.

## Mobile Node

Each VGC client user will be a mobile node that will jointly maintain and record a dynamic IP list, providing access wizard services for all visitors instead of DNS.

## IPFS Node

Using IPFS interstellar file storage technology, developer applications in the VGC ecosystem are distributed and stored in various hard disk mining nodes.

For more nodes and Miner program, please refer to the <VGC Technical White Paper>

# VCore Application Ecology

The VCore application is a client program that serves all VGC users, and users can experience the open services of VGC through this application. According to the market and industry conditions, the Vcore application ecosystem will continue to add new functions to serve users.

## VCore-Mobile user tools

Distribute VGC coins to users who pay attention to VGC and share the achievement of ecological development.

## VPay-Digital currency payment tool on the mobile phone

A payment platform that uses blockchain digital currency to quickly transfer transactions and payments. Integrated exchange function, convenient for users to buy and sell VGC.

## NFT Market - VGC NFT platform/game equipped with NFT

All users can create their own NFT to the VGC mainnet at low cost, and the game props/characters/equipment in the VGC ecosystem can exist in the form of NFTs in VGCMainNet

## VSteam-VGC App Store

All games/apps within the VGC ecosystem are released via VSteam, with integrated VGC payments, and no auditing or supervision. At present, a number of games and applications based on the VGC blockchain have been launched.

# VCore Application ecology

The VCore application is a client program that serves all VGC users, and users can experience the open services of VGC through this application. According to the market and industry conditions, the Vcore application ecosystem will continue to add new functions to serve users.

## VScan-VGC block explorer

VGCMainNet Block explorer.

## VGCMainNet-VGC blockchain mainnet

A new block is generated in 5 minutes, and all the blockchain data is permanently stored in the VGC blockchain node and miner node.

## VGC Miner's tools-VGC miner program

The mobile terminal is integrated in VCore, and users can open it themselves to get miner rewards;

The IPFS terminal is used for PC and server installation, providing hard disks for storage for applications in the VGC ecosystem and obtaining miner rewards.

# VGC Community

Barrier freedom communication capabilities  
through the VGC main network  
We will create a free/unregulated social  
platform for VGC users

**Nobody can limit it**

# More eco-app features

## VShop

**Decentralized online marketplace**

Users around the world can freely trade within VShop and pay through VPay

## VChat

**A secure and private chat tool** built using blockchain technology, No more worrying about being monitored by any organization or individual

## More

All that users love may appear in the VGC ecosystem, such as free music/information.

# Cooperate

Deploy **VGC** ecological application  
using **IPFS** technology.

Developers use virtualgamecoin to pay  
storage fees.

**VGC**

**IPFS** 

# VirtualGameCoin Tokens

VirtualGameCoin is currently a token running on the Tron TRC20 chain, which ensures the security and reliability of the token through the stable block technology of the Tron. **When the VGC mainnet is mature enough, the VGC community will vote to decide whether to map VGC to VGCMainNet.**

**Token name:** VGC (VirtualGameCoin)

**Total circulation:** 1,000,000,000枚

**Chain:** TRC20

**TOKEN Contract address:** 【TRC20】TLQRG1vajqi3CiH27tHQNNjnK4dAMB4s3v

**Allocation Rules :**

20% of VGC is reserved by the Ecological Laboratory Fund for the construction of the VGC Ecological Laboratory and the ecological development of the VGC community.

30% is reserved for the Genesis wallet to reward IPFS miners and mobile phone miners with TD5Hzq sPHyThWdppZr6gc19XdUweWZmexi

50% of VGC is distributed free of charge to global participants/users and community contributors through VCore's built-in algorithm.

Any organization or individual can participate, except for the ecological laboratory fund reserved for future VGC ecological development, the R&D team and community founding members do not reserve VGC, can not dump VGC to the community. VGC can only be obtained by anyone, including founding members and R&D volunteers, by participating in the purchase/provision of application services.

(2022/04)

150,000

VGCers/Volunteers

(2022/04)

11000+

**VirtualGameCoin** VGC(Trc20) Coin holders
